

AIRNOTE SETUP GUIDE

Here's what you'll find inside your new Airnote box:

- One Airnote
- Two batteries
- Eight velcro Command Strips in two clear plastic bags
- An insert with printed set-up instructions

Step 1: Turning On the Airnote

- Locate the two screws at the base of the device, and remove these to open the device.
- Insert the provided batteries into the battery slots, close the device, and then screw the needles back in
- Power on your Airnote by sliding the black switch at the base of the device. Allow it a few minutes to establish a connection.
- Once the device is powered on, check the LCD screen on the back. If you see any display on the screen, it indicates that the Airnote has initiated its self-test sequence and is ready for the next step.

Step 2: Choosing a Mounting Location

- After ensuring your Airnote is operational, find a suitable location to mount it. For optimal performance, it's best to mount the Airnote on the outside of an south-facing window that receives plenty of sunlight, if possible.

Step 3: Attaching the Mounting Strips

- Separate four of the included velcro Command Strips and create two pairs of strips by joining their velcro sides together.
- Remove the backing tape from one strip in each pair and attach them above and below the LCD screen on the back of the Airnote. Ensure the screen and the device's QR code will be visible through the window.

Step 4: Mounting the Airnote

- With the Command Strips attached to the device, remove the backing tape from the exposed sides of the strips.
- Firmly press the Airnote onto your chosen window location. The LCD screen should be clearly visible through the window, enabling you to monitor air quality readings.

Step 5: Adjusting the Position

- The Airnote box includes extra Command Strips in case you ever need to reposition your device.

Step 6: Scan & Customize Your Airnote

- Using a QR code reader on your mobile device, scan the unique QR code located on the back of the Airnote, just below the LCD screen. This will direct you to your personalized landing page on airnote.live.
- From this site, you can update device settings, input your contact information, and access your dashboard to view detailed charts and graphs for your Airnote.
